Download Videos From Web

There currently is no way to directly download a video directly from YouTube. There are a variety of potential tools available but this is the one we recommend. Note not all videos are allowed to be downloaded; it depends on the settings used to upload the video originally.

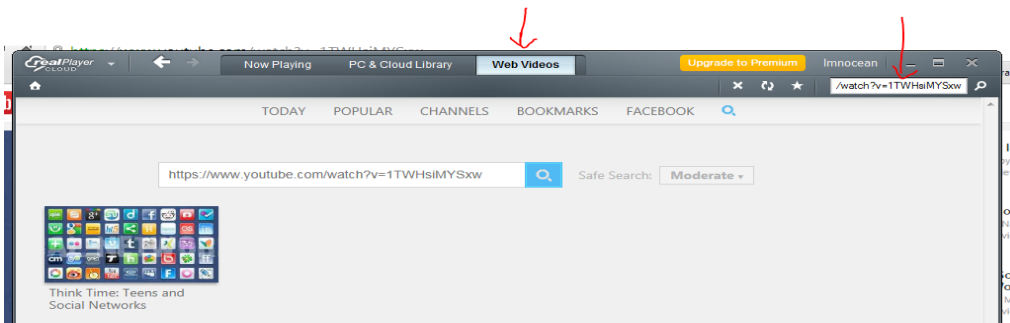

To Download RealPlayer Cloud - real.com

Find the video you want download. Copy the URL to the video

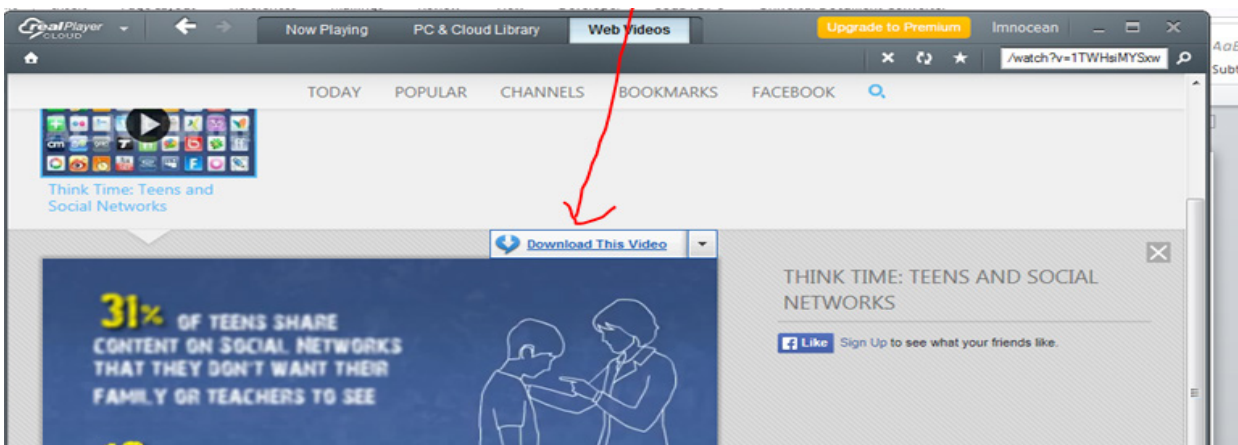

Open RealPlayer Cloud

Click on Web Videos, Copy/Paste vide URL in the Search Box and click the magnifying glass

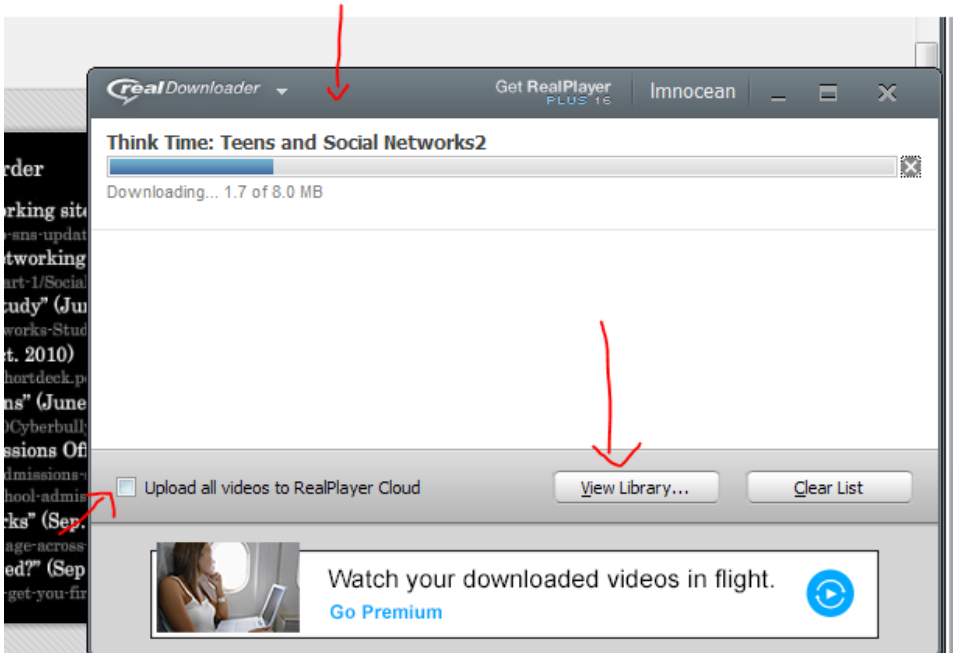

Click on video

Once video loads, mouse over the video (upper right hand corner). A “download video” button will appear. Click on it.

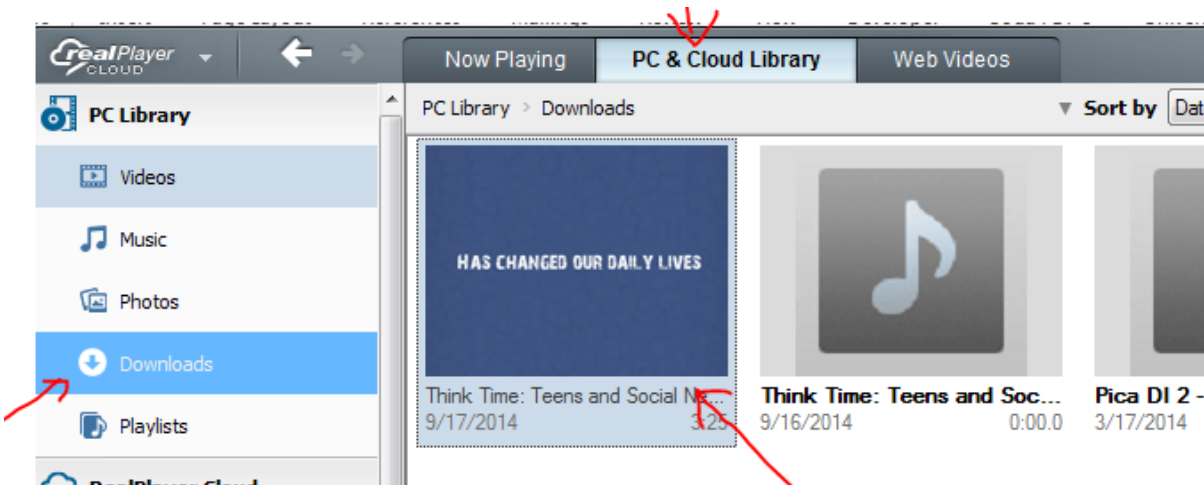

Then a window will appear showing the download progress. Unclick “upload to cloud”. Once complete, click on View in Library.

Once it is in your Library, then you can click/double click on the video and play from your computer.

To find your video in the future – Open RealPlayer Cloud, go to “PC & Cloud” and then “Download”

To find the file to copy to a thumb drive or DVD, navigate to your video folder, then find RealPlayer Downloads, find file and copy to your device.
